

Diagnostic and Staging of HPV-associated Tumours

Daniel Dindo
EBSQ Coloproctology
Division of Visceral- and Transplantation Surgery
University Hospital Zurich

Background

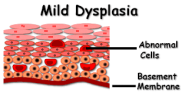

Incidence anal SCC:

- 1.6 / 100'000 
- 4 / 100'000 (1973-78) 
- 21 / 100'000 (1996-1999)¹
- 35 / 100'000 (HIV- MSM) 
- 70 / 100'000 (HIV+ MSM)^{2,3}

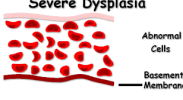

¹ Cress RD. Prev Med. 2003 ² Melbye M. Lancet 1994 ³ Goedert JJ. Lancet 1998

Background

Mild Dysplasia

Severe Dysplasia

- **Anal intraepithelial neoplasia (AIN I-III) :** precursor of anal cancer
- **High-grade AIN (AIN II/III)**
- **LSIL/HSIL:** Low/high grade squamous intraepithelial lesion
- (Carcinoma in situ (AIN III))

Diagnosis

Cytology

Bethesda Criteria:

- Normal
- ASCUS
- LSIL
- HSIL
- Cancer

Anal Pap Smear

to detect anal dysplasia of any grade 

	Sensitivity (%)	Specificity (%)	NPV (%)	PPV (%)
De Ruiter ¹ <i>et al.</i>	87	16	70	37
Palefsky ² <i>et al.</i>	81	63	95	46
Fox ³ <i>et al.</i>	83	38	33	86
Nahas ⁴ <i>et al.</i>	61	60	64	56

¹ DeRuiter A et al. Genitourin Med 1994; 70:22-5 ² Fox PA et al. SexTransm Infect 2005; 81:142-6
³ Palefsky et al. JAIDSHR 1997; 14:415-22 ⁴ Nahas CSR et al. DCR 2009; 52:1854-63

Anal Pap Smear

to detect anal dysplasia of any grade 

	Sensitivity (%)	Specificity (%)	NPV (%)	PPV (%)
De Ruiter ¹ <i>et al.</i>	87	16	70	37
Palefsky ² <i>et al.</i>	81	63	95	46
Fox ³ <i>et al.</i>	83	38	33	86
Nahas ⁴ <i>et al.</i>	61	60	64	56

¹ DeRuiter A et al. Genitourin Med 1994; 70:22-5 ² Fox PA et al. SexTransm Infect 2005; 81:142-6
³ Palefsky et al. JAIDSHR 1997; 14:415-22 ⁴ Nahas CSR et al. DCR 2009; 52:1854-63

Anal Pap Smear

Sensitivity/Specificity (for HSIL/ anal cancer)
 Patients with anal condylomata referred to surgery (n=319)

	Sensitivity (%)	Specificity (%)
HIV-neg. MSM	89	23
HIV-pos. MSM	93	58
MSM (entire)	90	33

Schlecht HP et al. CID 2010; 51:107-10

Anal Pap Smear

Sensitivity/Specificity (for HSIL/ anal cancer)
 Patients with anal condylomata referred to surgery (n=319)

	Sensitivity (%)	Specificity (%)
HIV-neg. MSM	89	23
HIV-pos. MSM	93	58
MSM (entire)	90	33

Schlecht HP et al. CID 2010; 51:107-10

Anal Pap Smear

Correlation between cytology and histology for HSIL

HIV-pos. MSM	p<0.001
HIV-neg. MSM	p=0.353

Schlecht HP et al. CID 2010; 51:107-10

Anal Pap Smear

Cytology (for AIN2+)
 – Cross-sectional, 401 HIV+MSM

	Sensitivity (%)	Specificity (%)
ASCUS threshold	82	39
HSIL threshold	21	91
Oncogenic HPV	100	16

Cervical PAP testing for women: Sensitivity of **50%** at a threshold of ASCUS to detect CIN2+²

²Cuzick J et al. Int J Cancer 2006;119:1095-1101 Salit IE et al. AIDS 2010; 24:1307-13

Anal Pap Smear

Cytology (for AIN2+)
 – Cross-sectional, 401 HIV+MSM

	PPV (%)	NPV (%)
ASCUS threshold	31	88
HSIL threshold	45	78
Oncogenic HPV	28	100

Salit IE et al. AIDS 2010; 24:1307-13

High-Resolution Anoscopy (HRA)

Diagnosis

50% of AIN are missed without the use of HRA

Watson AJ et al. ANZ J Surg 2006

To screen or not to screen?

HIV+MSM

Any abnormal cytological finding

➔ **HRA and biopsy**

Cranston RD et al. Int J STD AIDS 2007; 18:77-80

To screen or not to screen?

HIV+MSM

Any abnormal cytological finding

➔ **HRA and biopsy**

Positive predictive value: 95%

Cranston RD et al. Int J STD AIDS 2007; 18:77-80

Screening

Digital rectal examination and anal cytologic screening annually

HIV+MSM	any patient
HIV-MSM	any patient with a history of anogenital condyloma
Women	with abnormal cervical and/or vulvar histology

New York State Department of Public Health AIDS Institute. Clinical Guidelines. Accessed September 25, 2010

High-resolution Anoscopy

Because high prevalence of AIN2+ in HIV+MSM and the suboptimal test characteristics

➔ **HRA as first-line screening strategy**

Nahas CSR et al. DCR 2009; 52:1854-63
Salit IE et al. AIDS 2010; 24:1307-13

High-resolution Anoscopy

Cost-effectiveness study
401 HIV+MSM

1. Direct use of HRA
2. HRA if cytology abnormal
3. HRA if oncogenic HPV

➔ **Direct use of HRA most cost-effective to detect AIN II/III**

Lam JM et al. AIDS 2010, ahead of print

Anal Cancer

Carcinoma of anal margin
 15%
 m:w = 3:1
 Median age 50 yrs

Carcinoma of anal canal
 85%
 m:w = 1:2-3
 Median age 60 to 70 yrs

Anal Cancer

T1: Tumor <2cm
T2: Tumor 2-5cm
T3: Tumor >5cm
T4: Infiltration von angrenzenden Organen

N1: perirektaler LK-Befall
N2: einseitige inguinale LK
 einseitige LK der A. iliaca
N3: beidseitige LK perirektal, inguinal, iliakal

M1: Fernmetastasen

Symptoms of Anal Cancer

- **Anal lump**
- **Palpable inguinal lymph nodes**
- Incontinence
- Change of stool habits
- Pain
- Fistula

Diagnosis

- Inspection
- Palpation (DRE; Inguinal!)
 – BUT: 50% of pos. NII <5mm!¹
- Proctoscopy

¹Glynn-Jones R et al. Ann Oncology-2010

Lymph Node Metastases

- Ca of anal margin
 - **T1(<2cm)** **0%**²
 - **T2(2-5cm)** **23-24%**^{1,2}
 - **T3(>5cm)** **30-67%**^{1,2}

¹ML. Wietton. The ASCRS Textbook of Colon and Rectal Surgery, Springer 2007
²Barron W. Feig. M.D. Anderson surgical Oncology Handbook, sec. Edition, 1999

Lymph Node Metastases

- Ca of anal **canal**

– T1(<2cm)	0%
– T2(2-5cm)	8%
– T3(>5cm)	29%
– T4	35%

ML. Wellton , The ASCRS Textbook of Colon and Rectal Surgery, Springer 2007

Staging

- **PET/CT¹**
 - In up to 24% positive LN (PET-CT) in pat. with neg. nodes in CT
- **Endosonography²**
 - Up to 100% Sensitivity
 - Correct T-stage in 66% of pat.
- **MRI²**
 - 89% sensitivity for locoregional disease
 - In 50% correct T-stage
 - less sensitivity concerning N-stage (cf. PET-CT)

¹Glynn-Jones R et al. Ann Oncology 2010
²Otto SD et al, J Gastrointest Surg 2009

Conclusion

Cytology and HRA novel tools for diagnosis of AIN

Effectiveness yet to be determined

Guidelines still lacking
